Shipping	Accounts Payable
Invoicing	General Ledger
Sales Analysis	Banking
Manufacturing	Custom Financials
Manufacturing Jobs	More....
Job Costing	

Homepage

The system homepage provides a dashboard for quick analysis of business statistics. These key performance indicators (KPI's) graphically show the status of your organization.

Data Collection

Fully integrated bar code data collection module allows you to label your inventory for stock counts, print pick tickets to record shipments and manufacturing usage. Prevent mistakes and increase productivity by automating your inventory with Pilot ERP!

Sales and CRM

The Sales module is where it all begins. Your sales reps have the ability to access real time inventory availability and determine where the order is in production. From Quoting to Order Entry, Shipping to Invoicing, Pilot ERP covers all aspects of the order cycle. Integrate directly with UPS, FedEx, DHL, and USPS shippers. Create and print labels, calculate freight and save tracking information directly back to Pilot ERP, all in one easy step.

Inventory and Bills of Material

The Inventory module tracks inventory stock levels and costs, allowing you to efficiently manage your finished goods, work-in-process and raw material which is crucial for your operation. Pilot ERP gives you instant access to real-time data so you can track stock levels by item, location, item class and view historical usage right on the inventory screen.

Manufacturing, Material Requirement Planning (MRP) and Scheduling

The Manufacturing module tracks manufacturing orders, material (component items) and resource (labor and equipment) requirements, and production costs, prints bills of materials and passes data to the inventory module. MRP allows you to quickly generate requirements for both manufactured and purchased items to create Work Orders and Purchase Orders for future demand.

Procurement

The Purchasing module is used for material procurement. Pilot ERP makes it easy to buy from the vendors with the best prices and maintain a history of all purchases.

Accounting

The fully integrated Accounting Module incorporates Accounts Receivable, Accounts Payable, Banking, General Ledger and Financial statements into Pilot ERP allowing you to run your business in one program.
